

Bloomy Controls to offer NuGenesis® Technologies Data Management Solution

To help customers manage the large amounts of data acquired from test, measurement, and automation systems, Bloomy Controls now offers the NuGenesis Scientific Data Management System (SDMS).

"From pharmaceuticals to telecom to traditional manufacturing, the ability to acquire data has outpaced the ability to manage it," says Bernie Prusaczyk, NuGenesis Vice President of Business Development and Channels. "Together with Bloomy Controls, we can bring our data management system, which is used in all of the top 30 pharmaceutical companies, to the test and measurement market."

The NuGenesis SDMS is a fully automated system for laboratory test data and associated reports. The system's print-to-database technology eliminates cumbersome SQL coding and enables rapid integration with Windows-based data acquisition systems like National Instruments LabVIEW and TestStand. NuGenesis SDMS offers a hands-free, Web-based approach to securing, indexing, accessing, and reusing laboratory data. The system is easy to configure and requires little or no end-user training.

Bloomy Controls can implement and integrate the NuGenesis Scientific Data Management System into customers' measurement and automation systems. For more information, contact Bloomy Controls.

NuGenesis Technologies Corp., headquartered in Westborough, Mass., is the market leader in scientific data management. The company's patented products and implementation services provide significant new efficiencies in data management, information retrieval, and report development. With more time to focus on analysis, interpretation, and decision-making, science-based companies gain competitive advantage.
