Meet the Bloomy Sales Engineering Team

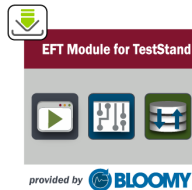

It is our pleasure to offer you the consultative services of our sales engineering team on your upcoming automated test programs. Combining strong technical and business acumen in tandem with Bloomy's test engineering subject matter expertise, we are ready to solve your most critical automated test challenges! Learn about the people and the skills they bring to bear.

MIL-STD-1553B Technical Brief

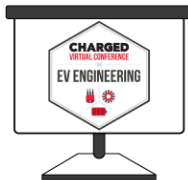

MIL-STD-1553B is a low-speed avionics data protocol often used in aircraft for communication between different Line Replaceable Units (LRUs). Hardware-in-the-loop (HIL) simulators and systems integration labs (SILs) frequently simulate MIL-STD-1553B networks using devices such as Bloomy's 1553B C-Series module. This tutorial presents a high-level overview of the MIL-STD-1553B protocol and implementation.

Download a 30-Day Trial of the EFT Module for TestStand

The EFT Module for TestStand is an advanced architecture that dramatically increases your productivity using NI TestStand. Features include hardware and measurement abstraction layers, manufacturing operator interface, database connectivity and more. Download version 2019 today!

Top 5 Challenges With Developing and Testing a BMS for a New EV Program

How do you develop and test the battery management system (BMS) concurrently while the vehicle and other battery systems are also under development, in order to maintain an aggressive schedule? This presentation, delivered at the Charged Virtual Conference on EV Engineering, discusses the top 5 challenges with BMS testing on new electric vehicle programs, as well as practical solutions.
